Experience

App&Web — Java Backend Developer

01/2021 - 03/2024

Gurugram, India

- Improved API performance by around 20% by identifying slow database queries and backend bottlenecks, then optimizing MySQL queries and Spring Boot request flows across 100+ REST APIs.
- Reduced recurring backend issues by approximately 18% by tracing defects to their root causes across API, database, and integration layers and validating fixes through Postman, SQL, application logs, Git, and IntelliJ IDEA.
- Reduced production and deployment issues by around 15% by troubleshooting AWS EC2 environments, resolving API and database integration problems, and thoroughly testing backend changes before releases.

Wipro Ltd — Project Engineer

06/2019 - 01/2021

Gurugram, India

- Improved application stability by approximately 15% by identifying recurring failures in Java applications, analyzing application logs and SQL queries, and implementing code-level fixes through root-cause analysis.
- Maintained 80-90%+ SLA compliance for assigned client issues by prioritizing incidents based on severity, tracking issues through resolution, coordinating with development and database teams, and validating fixes before closure.
- Strengthened collaboration across 3 teams during the Java-to-SharePoint migration by providing client data and Java system details, resolving data questions, and supporting applications throughout the transition.

Certifications

Google Cloud Computing Foundations Certificate. (In Progress) — [Credential](#)

Identity & Access Management: Coursera — [Credential](#)

Leadership & Projects

Biomedical RAG Chatbot — [Project Link](#)

- Delivers trustworthy, evidence-grounded biomedical answers by retrieving the top-3 relevant passages via FAISS before generation with Gemma, reducing hallucinated facts in high-stakes medical contexts.

SkillScreen - AI-Powered Proctoring & Interview Platform — [Project Link](#)

- Targeted the \$5,475 average hiring cost and 44-day median time-to-hire reported by SHRM (2025) by automating resume parsing, interview scheduling, resume-based question generation, and real-time candidate proctoring through containerized FastAPI microservices deployed on Azure.

Credit Card Default Prediction — [Project Link](#)

- Achieved 89% accuracy and 0.93 ROC-AUC by evaluating multiple models and selecting a tuned Random Forest over overfit XGBoost using recall, F1-score, and KS statistic to improve generalization.

Hospital Waiting List Dashboard (2018–2021) — [Project Link](#)

- Enabled healthcare stakeholders to track waiting list trends by consolidating four years of inpatient/outpatient data into an interactive Power BI dashboard with specialty and age-level drill-downs.

Education

Loyalist College, Toronto, ON - Post Graduate Diploma in AI & Data Science

Chandigarh Engineering College - Bachelors in Electronics & Communication Engineering

Skills

Languages And Frameworks: Python, Java, SQL, C, C++, FastAPI, Flask, Spring Boot, AWS, Azure, Docker

Generative AI: LangChain, LlamaIndex, FAISS, LLMs, RAG, Prompt Engineering

Machine Learning: TensorFlow, PyTorch, Scikit-learn, CNNs, OpenCV, YOLOv8, DeepFace

Data & Analytics: Risk Modeling, EDA, Statistical Analysis, Power BI, Pandas, Numpy

Databases & Tools: Git, MySQL, Postman, Maven

Soft Skills: Problem Solving, Cross-team Collaboration, Client Communication, Analytical Thinking, Adaptability
